

**Z&P is the Cybersecurity responsible for the P101 Project. This project, financed by the European Union, has the objective of ensuring the protection of critical infrastructures in 19 European and Asian countries from CBRN risks (2024-2028).**

**Infrastructures** represent the backbone of a modern State.

The **critical** ones are those whose destruction, or even their disuse, would lead to a serious crisis of the State itself, due to the consequent cascade effects.

Among critical infrastructures, the **CBRN** ones - Chemical Biological Radioactive and Nuclear - are those which, if put out of use, would cause not only a crisis in the functioning of the State but also dangers to the health, up to the loss of life, of citizens.

Nineteen Countries from currently politically sensitive areas (South East and Eastern Europe, the Middle East and Central Asia) have joined together in asking the European Union for help in protecting their critical CBRN infrastructures. The P101 project aims to respond to this request, under the coordination of ISTC – International Science and Technology Center.

**Zanasi & Partners**, an Italian SME specialized in Research and Consultancy in the field of Security and Defense, was chosen to guarantee the Cybersecurity of these critical infrastructures, thanks to its experience in the field as demonstrated by numerous research projects funded by the European Commission and commercial projects carried out in Europe, the Middle East and Africa for public and private organisations.

**IMPLEMENTATION TEAM**

**WITH THE SUPPORT OF**

**THE 3 GEOGRAPHICAL AREAS AND THE 19 COUNTRIES INVOLVED**

**South East and Eastern Europe (SEEE)**

**Middle East (MIE)**

**Central Asia (CA)**
